

Adding a product

Now for the fun stuff, adding your products! But before diving into your first product, you should familiarize yourself with how product categories, tags and attributes work.

Taxonomies

Categories and tags work in much the same way as any other post type categories and tags. They can be applied before or during the creation of a product.

Attributes, on the other hand, are different – they can be added per product, or you can set up global attributes for the entire store to use (for example, in layered navigation).

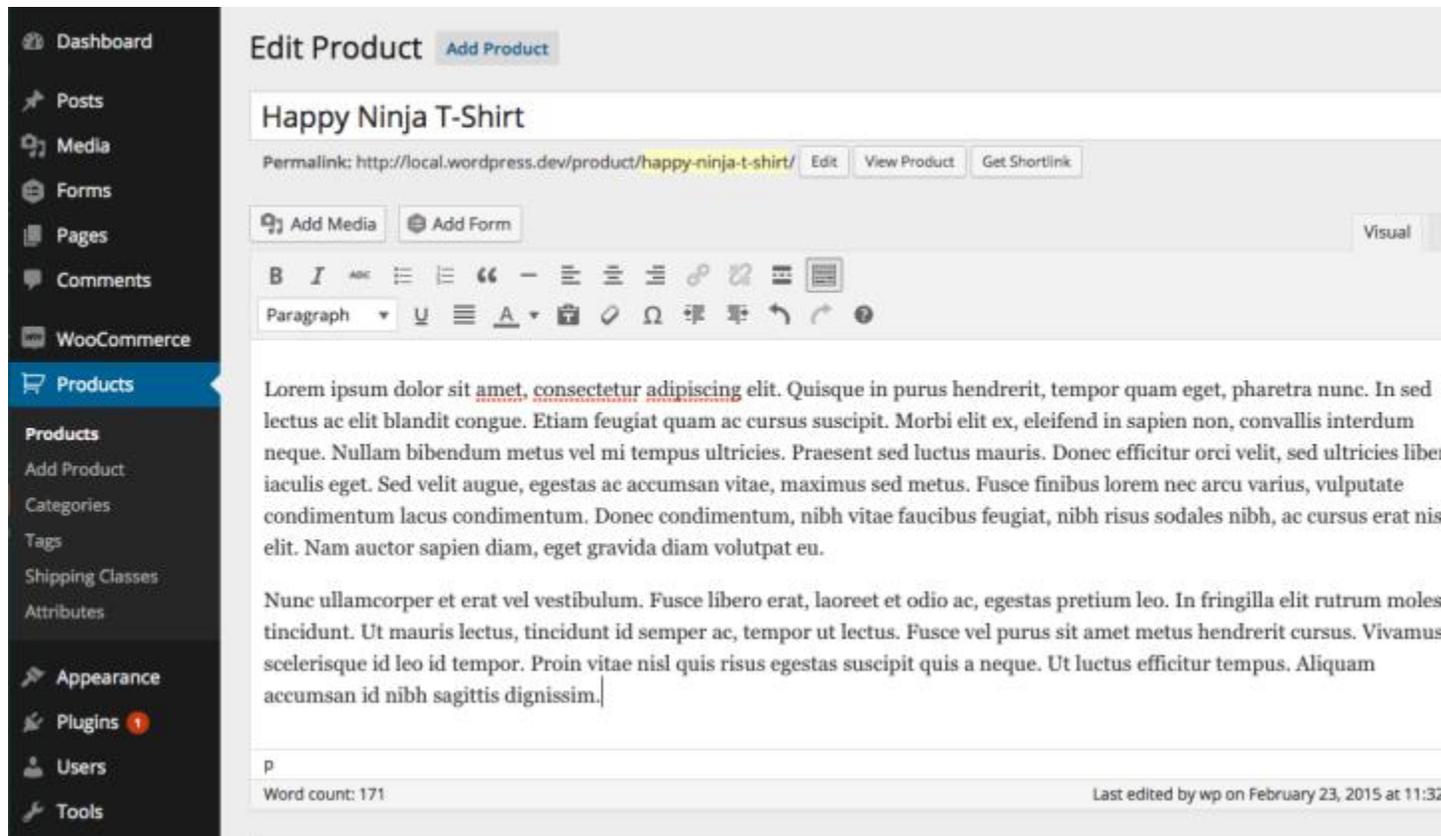

Product Types

With attributes and categories set up and stock management configured, we can begin adding products. When adding your product, the first thing to decide is what type of product it is.

- The **Simple** product type covers the vast majority of any products you may sell. Simple products are shipped and have no options. For example, a can of drink.
- A **Grouped** product is a collection of related products which can be purchased individually and can only consist of simple products. For example, a PS3 could be a grouped product as there are 80GB, 120GB and 200GB variations of that same parent product.
- An **External** or **Affiliate** product is one that you list and describe on your website, but is sold elsewhere.
- A **Variable** product is a product that has different variations, each of which may have a different SKU, price, stock options etc. For example, a t-shirt available in several different colours and/or sizes.

Adding a simple product

Adding a simple product is a straightforward process and similar to authoring a standard WordPress post. In the Products menu, click Add Product. You will be presented with a familiar interface and should immediately see where to type the product title and full description.

A familiar interface for adding product information

Under the main dialog box is the Product Type panel. Here you define the product type (as outlined above) and whether it is a **downloadable** (digital) or **virtual** (service) product.

Virtual products don't require shipping – an order containing virtual products won't calculate a shipping cost

Product data

Next is the Product Data tab set. This is where the majority of the product data is input.

Product Data — Simple product Virtual: Downloadable:

General	SKU	<input type="text"/>	?
Inventory	Regular Price (\$)	<input type="text" value="18"/>	
Shipping	Sale Price (\$)	<input type="text"/>	Schedule
Linked Products			
Attributes			
Advanced			

Product data is added from this panel

General tab

- **SKU** – stock keep unit, used to track products. Must be unique, and should be named so it does not clash with post IDs.
- **Price:**
 - **Regular Price** – Item’s main price.
 - **Sale Price** – Item’s sale price.

Inventory tab

The inventory tab allows you to manage stock for the product individually and define whether to allow back orders. If stock management is disabled from the settings page, only the ‘stock status’ option will be visible.

Product Data — Simple product Virtual: Downloadable:

General	Manage stock?	<input checked="" type="checkbox"/> <i>Enable stock management at product level</i>
Inventory	Stock Qty	<input type="text" value="10"/> ?
Shipping	Allow Backorders?	<input checked="" type="checkbox"/> Do not allow <input type="checkbox"/> Allow, but notify customer <input type="checkbox"/> Allow ?
Linked Products	Stock status	?
Attributes		
Advanced	Sold Individually	<input type="checkbox"/> <i>Enable this to only allow one of this item to be bought in a</i>

Checking the **Sold Individually** box limits the product to 1 per order.

Shipping tab

- **Weight** – Weight of the item.
- **Dimensions** – Length, width, and height for the item.
- **Shipping Class** – Shipping classes are used by certain shipping methods to group similar products.

We currently offer 4 shipping classes on the Reflexology Hub:

- US flat rate 1 lb (USPS)
- US flat rate 2 lb (USPS)
- US flat rate 3 lb (USPS)
- Free shipping
- Shipping calculated in PayPal

Linked Products tab

Using up-sells and cross-sells you can cross promote your products with one another. They can be added by searching for a particular product and selecting the product from the dropdown list:

Product Data — Simple product | Virtual: Downloadable:

General	Up-Sells	silh	?
Inventory	Cross-Sells	#21 – Ninja <u>Silhouette</u> T-Shirt	?
Shipping	Grouping	Choose a grouped product...	?
Linked Products			
Attributes			
Advanced			

After adding them, they will be listed in the input field:

Product Data — Simple product | Virtual: Downloadable:

General	Up-Sells	× #21 – Ninja Silhouette T-Shirt	?
Inventory	Cross-Sells	Search for a product...	?
Shipping	Grouping	Choose a grouped product...	?
Linked Products			
Attributes			
Advanced			

Up-sells are displayed on the product details page. These are products that you may wish to encourage users to upgrade, based on the product they are currently viewing. For example, if the user is viewing the coffee product listing page, you may want to display tea kettles on that same page as an up-sell.

You may also like...

Happy Ninja T-Shirt

\$18.00

Add to cart

Ninja Silhouette T-Shirt

\$20.00

Add to cart

Cross-sells are products that are displayed with the cart and related to the user's cart contents. As an example, if the user adds a Nintendo DS to their cart, you may want to suggest they purchase spare Styluses when they arrive at the cart page.

Grouping – Set this option to make a product part of a grouped product.

Attributes tab

On the attributes tab, you can assign attributes to a product. You will see a select box containing global attribute sets you created (e.g., platform).

Once you have chosen an attribute from the select box, click add and you can apply the terms attached to that attribute (e.g., Nintendo DS) to the product. You can hide the attribute on the frontend by leaving the Visible checkbox unticked.

Custom attributes can also be applied by choosing 'Custom product attribute' from the select box. These are added at the product level and won't be available in the layered navigation.

Advanced tab

- **Purchase note** – Enter an optional note to send the customer after purchase.
- **Menu order** – Custom ordering position for this item.

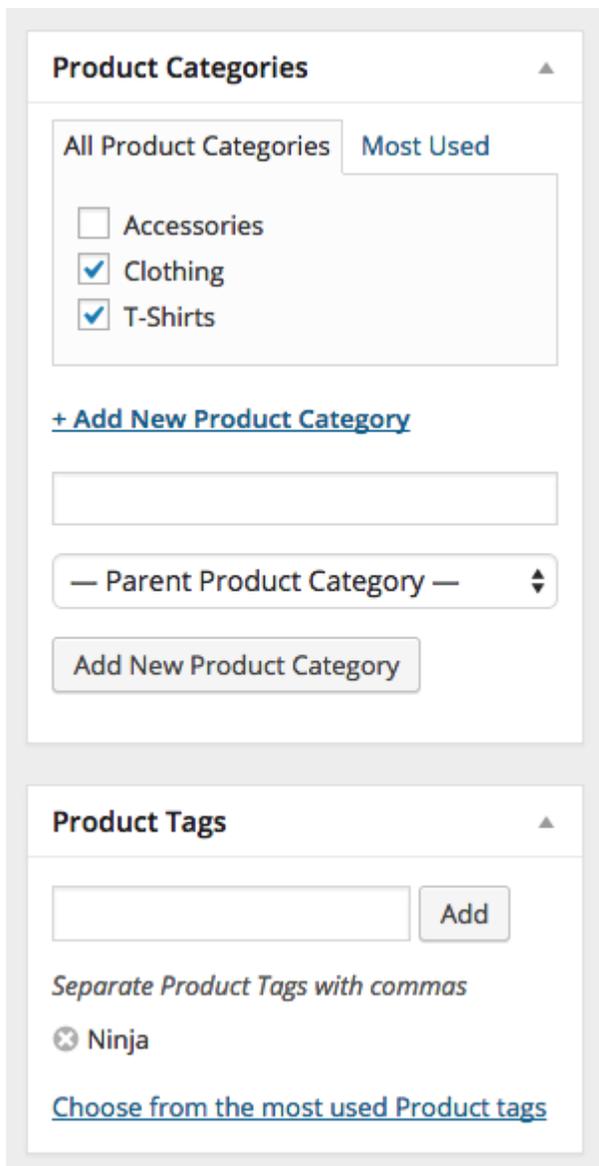

- **Enable Reviews** – Enable/Disable customers reviews for this item

Excerpt

Finally, you can add an excerpt that should be a short product description. Typically this appears next to the product imagery on the listing page, and the long description appears in the Product Description tab.

Taxonomies

On the right hand side of the Add New Product panel, there are product categories in which you can place your product, similar to a standard WordPress post. You can also assign product tags in the same manner.

The image shows a screenshot of the WordPress 'Add New Product' panel, specifically the 'Product Categories' and 'Product Tags' sections.

Product Categories

There are two tabs: 'All Product Categories' and 'Most Used'. The 'All Product Categories' tab is active.

Under the 'All Product Categories' tab, there are three checkboxes:

- Accessories
- Clothing
- T-Shirts

Below the checkboxes, there is a link: [+ Add New Product Category](#)

There is an empty text input field for the category name.

Below the input field, there is a dropdown menu labeled: **— Parent Product Category —**

At the bottom of the 'Product Categories' section, there is a button: **Add New Product Category**

Product Tags

There is an empty text input field for the tag name, followed by an **Add** button.

Below the input field, there is a note: *Separate Product Tags with commas*

There is one tag already added: **Ninja** (with a close button 'x' to its left).

At the bottom of the 'Product Tags' section, there is a link: [Choose from the most used Product tags](#)

Product image

You can add both a main image and a gallery of images.

Setting catalog visibility and feature status

In the publish panel, you can set catalog visibility for your product.

Publish ▲

[Preview Changes](#)

📌 Status: **Published** [Edit](#)

👁️ Visibility: **Public** [Edit](#)

📅 Published on: **Feb 23, 2015 @ 23:32**
[Edit](#)

Catalog visibility: Catalog/search

Define the loops this product should be visible in. The product will still be accessible directly.

Catalog/search
 Catalog
 Search
 Hidden

Enable this option to feature this product.

Featured Product

[OK](#) [Cancel](#)

[Copy to a new draft](#)
[Move to Trash](#) [Update](#)

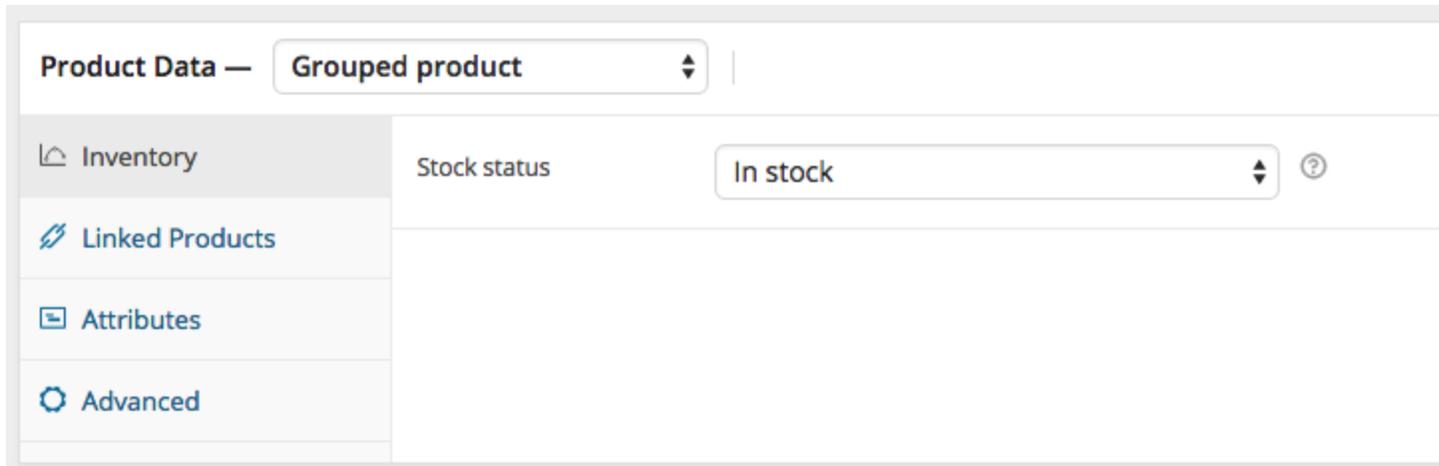

Visibility can be set to:

- **Catalog and search** – visible everywhere
- **Catalog** – visible in catalog loops, but not search

- **Search** – visible in search results, but not in the catalog (categories/shop page)
- **Hidden** – only visible on the single product page – not in any product loops

Adding a grouped product

A grouped product is created in much the same way as a simple product. The only difference is you will select **Grouped** from the Product Type dropdown in the General product tab details, as shown below:

To create your parent product select ‘Grouped’ from the Product Type Dropdown.

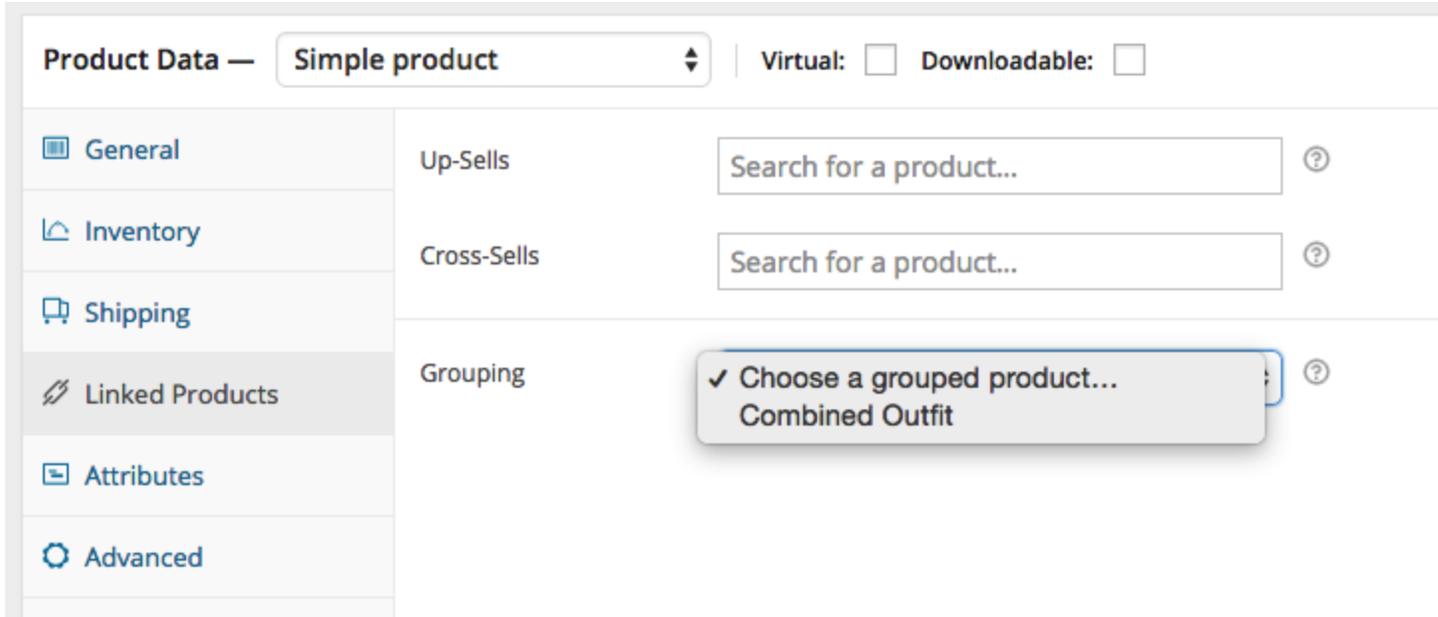

Upon setting the parent product as Grouped, the price and several other fields will disappear. This is fine because you’ll be adding this information to individual child products. Once you’re finished with the parent product, publish it and come back to the **Add New Product** page.

Create a Child Product inside a group

To create a child product, go to: **Products > Add New** to add a new product. The only information you’re required to enter is:

- Title
- Product Type = Simple

You can also add your price and other product details, as needed. Now go to **Linked Products** to select the parent product from the **Grouping** dropdown, as shown below:

If you wish to control the order in which products are shown within a group, edit the Menu Order option under the Advanced section in product data.

Adding a virtual product

When adding a simple product, you can check the **virtual** box in the product type panel. This will remove unnecessary fields, such as dimensions.

Adding a downloadable product

When adding a simple product, you can check the **downloadable** box in the product type panel. This will add two new fields:

1. File path – path or url to your downloadable file.
2. Download limit – a limit for the number of times the customer can download the file.
Left blank for unlimited downloads.

For maximum flexibility, downloadable products also incur a shipping cost (if, for example, you were offering both a packaged and a downloadable version of a product, this would be ideal). You can also check the Virtual box if the downloadable product is not shippable.

Adding an external product

Choose 'External/Affiliate' from the product type dropdown. This removes unnecessary tabs, such as tax and inventory, and inserts a new product URL field. This is the destination where

users can purchase the product. Rather than Add to Cart buttons, they see a Read More button directing them to this URL.

Adding a variable product

Variable products are arguably the most complex of product types. They let you define variations of a single product where each variation may have a different SKU, price or stock level.
